

Important MRI Development Milestone Surpassed

ViewRay announced today that it has established both Phase I MRI design and feasibility thus surpassing an important Renaissance™ developmental milestone. Importantly, the MRI design team successfully incorporated ViewRay's stringent specifications into the optimal open-MRI platform for radiotherapy.

This favorable news underscores the Company's intention to design and build a radiotherapy device that will fit within the footprint of already existing linac devices and be capable of real-time imaging during beam-on irradiation. Additionally, the MRI component of the Renaissance™ will boast a large field of view and bore to accommodate patients of size.

ViewRay's collaborator for this MRI design, Magnex Scientific Ltd., a Varian Inc. company, is the world's leading company in the design and manufacturing of state-of-the-art NMR Magnet Systems.

ViewRay has licensed its patent pending technology from the University of Florida and is solely dedicated to its development and commercialization.
